

CYBER SECURITY SOLUTIONS & SERVICES

Ben Yaquot Group has agency relationship with state-of-art Austrian entities to provide products to counter cyber digital risks and vulnerabilities that can detect, respond, protect and prevent cyber-attacks, and most importantly our customers will have **FULL** Control.

Desoma GmbH, Austria

IP Monitoring & Analytics

Desoma products focuses on mass data collection, extraction and data forensic on IP/network and communication protocols specialized on corporate and governmental needs.

Cyber Security Training

Desoma Cyber Security Academy offers theoretical and practical training to produce the experts of tomorrow by offering specialized cyber security education.

Desoma has a team of experienced experts in the field of IP communication, IP forensic and Cyber Security.

Pen Testing

In order to provide the best possible overview of the cyber security of an organization, Desoma can simulate a staged cyber-attack in order to find the vulnerabilities in your IT system, and provide a detailed and comprehensive analysis of the vulnerabilities areas which needs to be addressed. Furthermore, Desoma also provide you with possible solutions to avoid cyber-attacks from being successful in your company or organization.

CyberTrap, Austria

Deception Solution & Deception Analytics

CyberTrap provides a deception copy of client's systems to lure and trap attackers to a safe simulated system looking similar as the production systems.

Using deception technologies, attackers are deliberately diverted into a specially created IT environment even before they can penetrate further into the company's or government actual infrastructure. Within this fictitious environment, it is possible to systematically observe the attackers in order to identify their motivation, methods and, in some cases, even their identity and clients.

Austrian Institute of Technology (AIT)

Training & Certification

AIT (*part of Federal Ministry of Innovation and Technology*) provides cyber range training (train the trainer) services mainly to critical infrastructure providers as well as to government ministries and security organisations. Training includes:

- IP Analytics for Cyber Security – detection of ransomware, spyware and denial of service attacks and other defined digital anomalies in networks.
- Knowledge transfer in nearly all categories of cyber security and threat detection methods
- Training on Penetration testing and technical auditing
- Cyber Security Training & Certification

Digital Currency Monitoring

An AIT solution to analyse flows of various digital currencies.

Artificial Intelligence (AI) solutions

Based on AIT's own AI technology, AIT experienced team and partners provide required technologies and training services and implementation of customised AI solutions for clients' requirements.
